RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 70 pages. Original publisher: Research Triangle Park, NC : United States Environmental Protection Agency, Office of Air Quality Planning and Standards, Emissions, Monitoring and Analysis Division, 2005 OCLC Number: (OCoLC)70247076 Subject: Speciation (Chemistry) -- United States. Excerpt: . . . sulfate monitors had significantly different conversion efficiencies at the various sites, although the gas analyzer efficiencies were consistently high. The most time-consuming activity for the sulfate monitor was data acquisition and data processing; running aqueous standards and dealing with the flash strip failures were the next most time-consuming activities. 3. 3 R and P 5400 CARBON MONITOR Of the EC, OC, and TC data from the R and P 5400, only the OC and TC data at the Seattle site met the predictability criteria while the TC data at the Indianapolis site almost met the predictability criteria. R and P 5400 EC, OC, and TC data did not meet the comparability criteria at any site. When compared with the STN carbon data, there was significant negative bias in the R and P 5400 TC, OC, and EC data at all five sites; regression slopes typically averaged 0. 4 to 0. 6. The most time-consuming activity for the 5400 carbon monitor was data acquisition and data processing; flow problems, along with oven and afterburner problems, were the most frequent and recurring operational issues. 3. 4 SUNSET CARBON MONITOR The results for the Sunset carbon monitor operated at three (Phoenix, Chicago, and Seattle) of the sites were significantly better. The EC data at Phoenix met the slope and intercept comparability criteria; the EC, OC, and TC data from all three sites either met or almost met the ratio-of-means and correlation comparability criteria; and EC, OC, and TC at...
