Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1829 Excerpt: .1.25, 1.25 and 1.25=3 differences. Whence $\frac{1}{3.75} \times 1.25 \times 1.25 \times 1.25 = \frac{1}{3.75} \times 17253 = \frac{1}{7.32421875} = 2.7063 =$ arca of the base as before, And $2.7063 \times 10 = 27.063$ solid feet, the content of the prism required, 2. What is the solidity of a triangular prism, whose length is 18 feet, and one side of the equilateral end 15 feet? Ans. 17.5370265 feet. 3. Required the solidity of a prism whose base is a hexagon, supposing each of the equal sides to be 1 foot 4 inches, and the length of the prism 15 feet. Ans. 69.282ft. PROBLEM IV. To find the convex surface of a cylinder. RULE. Multiply the periphery or circumference of the base, by the height of the cylinder, and the product will be the convex surface required. EXAMPLES. 1. What is the convex surface of the right cylinder ABCD, whose length BC is 20 feet, and the diameter of its base AB 2 feet 1 See Notes to Prob. III. Cor. ft. p. 56. t Demon. If the periphery of the base be conceived to move in a direction parallel to itself, it will generate the convex superficies of the cylinder, and, therefore, the said periphery being multiplied by the length of the cylinder, will be equal to that superficies. Q. E. D. Note. If twice the area of either of the ends be added to the convex surface, it will give the whole surface of the cylinder. Here $3.1416 \times 2 = 6.2832 =$ periphery of the base AB. And $6.2832 \times 20 = 125.6640$ square feet, the...
